

Joe Sciabica Innovation Award

The Joe Sciabica Innovation Award is designed to recognize the person or group who best demonstrates leadership in innovation through collaboration. The award is named after Joe Sciabica, current President of Universal Technology Corporation, former Director of the Air Force Civil Engineer Center and past Executive Director of AFRL, whose vision and efforts played an integral role in the Dayton region's collaborative growth of innovative technical capabilities in advanced sensor technology.

To meet the criteria for the award, nominees must have demonstrated leadership in a collaborative effort that led to innovation in a sensor-systems or data-to-decisions technology area, and which also created economic or performance value or dramatically improved effectiveness of the technology. The effort was also evaluated on the number of jobs it created in the Dayton region. All activities for consideration in nominations for the 2017 award must have taken place after Oct. 1, 2011.
